

Petition to Congress: Protect E-Rate and America's Digital Learning Connectivity

October 19, 2026

We, the undersigned 464 education and community leaders, urge Congress to protect and strengthen the E-Rate program, the nation's most important education broadband program and the fifth largest source of federal funding for the nation's schools.

For nearly three decades, E-Rate has helped ensure that schools and libraries have access to the affordable, high-capacity broadband connectivity needed to support teaching, learning, and school operations. Today, E-Rate-supported networks enable digital learning, online assessments, student information systems, communications with families, school safety systems, and access to the educational resources students need to succeed.

We are deeply concerned that the Federal Communications Commission (FCC) is considering changes to the E-Rate program, including whether the program should be narrowed or even terminated. If any of these proposals to reduce or eliminate E-Rate are adopted and implemented, schools and libraries around the country will sustain significant budgetary hits and be forced to make difficult decisions on how to compensate for E-Rate support losses. In many cases, these potential E-Rate changes could undermine or eliminate E-Rate's longstanding mission of connecting schools and libraries to affordable broadband services.

We share the goal of protecting students online. Student safety, privacy, and responsible technology use are critically important. However, reducing support for school broadband or shifting E-Rate away from its core purpose is not the answer.

Decisions about curriculum, classroom technology, and instructional practices should remain with state and local educators, school boards, and families. The FCC can make its greatest contribution by ensuring that schools have secure, reliable, and resilient broadband networks and by strengthening protections against the growing cybersecurity threats facing K-12 education.

At a time when policymakers are encouraging schools to prepare students for an AI-driven economy, access to robust broadband infrastructure is more important than ever. Students cannot develop AI literacy, digital literacy, cybersecurity awareness, and workforce-ready technology skills without the connectivity that makes modern learning possible.

We respectfully urge Congress to exercise its oversight authority and encourage the FCC to preserve E-Rate's core mission of expanding universal affordable broadband access for schools

and libraries while strengthening cybersecurity protections for K-12 networks. Congress should reject efforts that would weaken, narrow, or undermine this critical program.

America's students, educators, and communities depend on E-Rate. We urge you to protect and strengthen this successful program for the next generation of learners.
